SmartBunker® has a unique easy to operate dispensing mechanism. Simply place bucket inside, then pull handle downwards to release the animal feed. Very little force is required. As you let go, the handle returns automatically and flow into the bucket stops. SmartBunker® can be packed down into a very small space for transportation. SmartBunker® can be easily carried through a standard doorway in its packed form - this allows it to be used even in places with limited access. SmartBunker® is suitable for indoor or outdoor use.

1. SmartBunker () stores your animal's feed at a high level for the following reasons: a. This ensures that meal is automatically rotated, i.e. meal at the bottom is used first, therefore does not turn stale. This saves money whilst protecting your animal's health. b. Meal is encased in such a way that it is totally vermin proof.
2. Capacity up to 200kg depending on the density of feed used.
3. SmartBunker® can be fully assembled in 5 minutes.
4. SmartBunker® has a unique inner chute, suitable for use with a typical bucket.
5. SmartBunker® has been designed carefully for excellent stability and resistance to tipping. Additionally, 4 holes are incorporated into the base. This gives the user an option to bolt the base rigidly to the ground. This is provided for instances where there is a perceived risk of very strong winds, vandalism, theft etc.
6. Key Lockable Lid, keys supplied.
